The advantages of a PPT smartphone

(Push-to-talk)

PULSACOM® is a professional communications system that enables you to convert your smartphone and other devices into a PPT telephone, allowing the entire team to join in a single conversation.

Multiple functions with a single APP.

Cover all your individual and group communication needs in an easy-to-use application for smartphones (Android and iOS), tablets and desktop computers.

Desktop application.

PULSACOM® offers you a command and control centre that allows location and mapping, geofencing, voice recording or call logs, as well as other advanced functions, all from a PC.

This software combines the best of private mobile and cellular telephone systems.

Key features:

-  Private and group PTT calls
-  Real time presence
-  Do not disturb
-  Priority scanning of conservation groups
-  Background calls
-  Voice mail
-  Text messages
-  Videos, photos and files
-  Localisation, mapping and monitoring
-  Geofencing
-  Exchange data and files
-  4G/5G technology

Fast and functional professional communications.

PULSACOM®'s characteristics make it ideal for working in areas that require fast and highly functional communications. Push-to-talk.

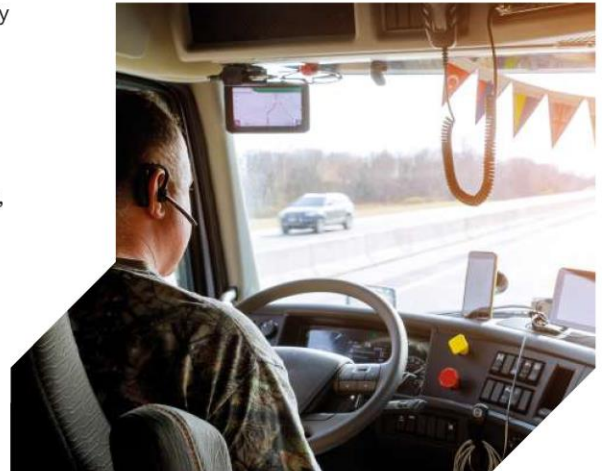

No geographical restrictions

The software allows connection to a public IP network, so users have no geographical restrictions and can take advantage of the full range of smartphone functions in terms of communication: individual, group and priority calls, messages, GPS tracking...

On your smartphone

In addition to a wide range of professional devices, PULSACOM® is compatible with your own smartphone, making communications with all members of the team easy.

Designed for work

Easy to use and manage

Worldwide push to talk

Fully integrated PMR networks.

Cloudware solution

Where you can manage the service and adjust the settings, as well as integrate it into other networks (DMR, TETRA, GSM, etc.).

Flexibility

Select and adjust as you go the number of users you need, the services you require and the devices you wish to work with. A solution that adapts to you, not the other way.

Compatibility

A brand new service that is compatible and integrable with your former analogue or digital radio network and all brands (Motorola, Kenwood, Sepura, Teltronic, Icom, Hytera, etc.). You will extend the useful life of your equipment while you move into the next generation at your own pace.

Scalability

Extend the scope of the service to include all the users you need. There is no need to be tied by the number of devices available. Now you can size it to meet your needs (events, seasonality, etc.).

Cost-effectiveness

Purchase or hire equipment and leave the rest to us. It is sold as SAAS (Software as a Service), in other words, via a monthly fee that provides access to the service. You only pay for what you need, when you need it.

Install the applications for your smartphone or desktop and start using **PULSACOM** to connect radio, smartphone and desktop users.

We are your eyes.

Cameras at the service of security professionals.

The public and private security forces of the 21st century need new technological tools with cutting-edge features that allow the recording and taking of live images:

- To dissuade against inappropriate conduct.
- To guarantee their own integrity and safety.
- To obtain evidence.
- To guarantee their own conduct.

An opportunity to acquire robust radio-communication devices and accessory for professional use.
